#### Description

When you enable content element translation in a WS (which is hidden in LIVE), you cannot see the effect in the workspace preview.

Setup:

Workspace	Default Lang Content	Translated Content
LIVE	enabled	hidden
WS	enabled	enabled

PageRepository->getRecordOverlay() first does the language overlay and the version overlay afterwards. But the language overlay applies enable field restrictions, so the translation is not loaded (even it would be enabled in the WS version).

##### Revision f25f9752 - 2021-03-06 11:20 - Christian Kuhn

[BUGFIX] Show records in ws preview if live is hidden

Scenario: A translated content element is hidden in live, a workspace overlay is not hidden. In workspace preview, the element should be shown - since it is not hidden in workspace. This is not the case.

The patch fixes this: The 'base' db call for content elements ignores hidden & time based restrictions and elements are sorted out by versionOl() instead, if a workspace preview is requested.

Resolves: #93336

Releases: master, 10.4
