

TYPO3 Core - Bug #93409

Inconsistent parsing of URLs without <a> tag

2021-02-02 10:48 - Sybille Peters

Description

Parsing of URLs without a <a href tag in tt_content.bodytext gets inconsistent results.

Sometimes it is a link in the frontend, sometimes not, the rendering of frontend and RTE is not always consistent.

Example 1

```
<p>Weitere Informationen sind auf der Webseite des Projekts zu finden https://www.klasse-klima.de/  
.<br />  
BUNDjugend, Klasse Klima (https://www.klasse-klima.de/sfsd)<br />  
</p>
```

- In the frontend, the first URL is rendered as link, the second is not
- In the RTE, both links are not rendered as links

Example 2

URL without <a href and directly followed by a ")" gets different results:

1. is rendered as link in frontend
2. is not rendered as link in RTE
3. is incorrectly evaluated by linkvalidator as URL with the), so e.g. URL "https://example.org" becomes "https://example.org)"

tt_content.bodytext has softref:

```
typolink_tag,email[subst],url
```

I have wondered about the "url" in there, if you remove that you could just parse explicit links with "<a>" as links which seems to me to be a "cleaner" solution.

Example

The following (raw) example text in tt_content.bodytext:

```
<p>(some url http://t3coredev/sdfdsf2) more text ...</p>
```

system

- latest master
- with Introduction package
- points 2 and 3 can be reproduced without Introduction Package, did not test 1) as that requires rendering of content in frontend
