##### Revision 3b3321ba - 2021-07-20 21:33 - Oliver Bartsch

[BUGFIX] Check whether tt\_content parent page is accessible

Both, DatabaseRecordList as well as the ContextMenu feature the "Show" button to preview a content element on its parent page. However, in case the parent page is a "no view doktype" (e.g. sys folder), those buttons lead to a 404 error.

This is now fixed by properly checking whether a content elements' parent page can be viewed. If not, the button is no longer shown.

Resolves: #93718

Releases: master, 10.4

### #1 - 2021-03-20 11:12 - Guido Schmechel

A quick test. It works in the record list. Sebastian: Would you like to contribute the patch as a kick-off? We probably need the logic a little more abstractly, since we also need the check for the ContextMenu in `typo3/sysext/backend/Classes/ContextMenu/ItemProviders/RecordProvider.php:canBeViewed()`.

### #2 - 2021-03-21 16:56 - Sebastian Fischer

I'm working on a more general solution, but cant push it because of error:

```
⌘1 ⌘ LC_ALL=en_GB git push origin HEAD:refs/for/master 17:40:52
ERROR: Permission to TYPO3/TYPO3.CMS.git denied to garbast.
fatal: Could not read from remote repository.
```

Please make sure you have the correct access rights and the repository exists.

So I'm a little lost with it.
