Description

Since [#93048](#) there is a new condition in /core/Classes/Utility/PathUtility.php line 54:

```
elseif (file_exists(Environment::getPublicPath() . '/' . $targetPath))
```

This check triggers a warning like:

```
Core: Exception handler (WEB): Uncaught TYPO3 Exception: #1476107295: PHP Warning: file_exists(): open_basedir restriction in effect. File (/var/www/example.com/web/./typo3conf/ext/dce/Resources/Public/JavaScript/Contrib/codemirror/lib/codemirror.css?1620224059) is not within the allowed path[...]
```

Easy fix would be to suppress warning with "@file_exists" like in other parts.

Non-composer

TYPO3: 11.2

PHP: 7.4
