## **Description**

Size and style should inherit by default and animation should not cause inline text overflows.

## Revision 1cfbf51a - 2021-05-19 14:16 - Benjamin Franzke

[TASK] Streamline spinner web component size and animation

This change performs the following optimizations:

 Detach spinner from content flow using a relative+absolute position normalization, allowing an equivalent positioning to the regular backend icons.

This is to ensure that both, <typo3-backend-spinner> and <typo3-backend-icon> render equally when used in inline(-block) containers (for example .svg-toolbar\_\_drag-node). <typo3-backend-spinner> used to cause vertical alignment offsets, when the spinner was positioned in inline text-flow and therefore caused the vertical flow to cause offsets.

- Add a variant="light|dark" attribute to select between the available TYPO3 spinner variants. By default the current color is now used.
- Adapt sizing to inherit size from current font-size when used without a specific size attribute. Also apply that to the backend icon component to stay interchangeable.
- Render spinner via SVG and only animate the spinning part instead of the entire shape. This is to avoid the bouncing-icon effect that CSS animations on the entire element cause (as often seen with font-awesome spinners for example).

Releases: master Resolves: #94149
