Description

There are a few requests that are made by the JavaScript of the Workspaces module (stageExecuteAction, sendToSpecificStageExecute in workspaces/Resources/Public/JavaScript/Backend.js) that may not be successful. However, so far there is no indication of this for the user. The user should at least receive a notification (via "TYPO3\CMS\Backend\Notification"?) that something could not be executed correctly.

Found in v9.5 and also v10.4.

History

#1 - 2021-06-24 08:54 - Lukas Speck

- Subject changed from *Not notification in workspaces module if AJAX-Request has result with no success* to *No notification in workspaces module if AJAX-Request has result with no success*

#2 - 2021-06-24 09:09 - Lukas Speck

- Category changed from *Backend JavaScript* to *Workspaces*
