[FEATURE] showPossibleLocalizationRecords for tt_content image, assets, media

Scenario:

A tt_content default language record with images, assets or media is localized ("translate" / "connected" mode, not "copy") to another language. Attached images, assets and media will be localized, too.

If later the default language record is changed to add another image, asset or media, the localized record now shows the additional default language record relation as shadowed box and allows localizing this additional record with a single click.

This is done by setting for those TCA inline relations: ['appearance']['showPossibleLocalizationRecords'].

Notes:

- showPossibleLocalizationRecords works on l10n_parent and does NOT honor l10n_source (yet?): In a 'localization chain' (default is localized to dutch, dutch is localized to german), an additional image, asset or media on the dutch record **is not** shown in the german record, but an additional record in default language **is** shown in the german record.
- showAllLocalizationLink: This is an optional additional button to localize all missing relations with one click, not only single ones. This is **not** enabled with the patch: The additional button bloats the already pretty complex interface even more, and editors often only need to deal with one or at least only a small list of additional relations. Instances where editors often deal with lots of such inline relations can easily enable that button on their own.
- showSynchronizationLink: The behavior of that button is in practice very similar to showAllLocalizationLink and **not** enabled for similar reasons.
