Description			
It would be great to define options.defaultUploadFolder also for PageTSConfig.			
Much more important since in tree.rootLineIds doesn't work anymore in UserTSConfig (see https://forge.typo3.org/issues/92120).

Hey Bernhard,

just to understand the use-case you're looking for: You want to define a default uploader for a e.g. specific IRRE field, right?
