[BUGFIX] Only minifyJS once in Frontend

If you have inline JS (or inlineFooterJS) code the method "GeneralUtility::minifyJavaScript()" is called twice for the same code to actually minify the code, because PageRenderer takes care of minification, so FE process does not explicitly have to do that.

This does no harm, only if there is a hook within minifyJavaScript(), the processing is triggered twice. This also only happens if config.compressJs = 1 is called.

Resolves: #94716

Releases: master

History

#1 - 2021-08-05 06:36 - Benni Mack

If you have inline JS (or inlineFooterJS) code the method "GeneralUtility::minifyJavaScript()" is called twice for the same code to actually minify the code, because PageRenderer takes care of minification, so FE process does not explicitly have to do that.

This does not harm, only if there is a hook within minifyJavaScript().

Example:

```
page.config.compressJs = 1
page.config.removeDefaultJS = 0
page.jsInline.10 = TEXT
page.jsInline.10.value (
    alert('NOICE');
);
```

Using xdebug it is obvious that the old way was calling the method twice.
