Description

When an object contains a typed (non-literals only) collection property (array or Traversable) the PropertyMapper wants to fill that collection with the relevant objects. Now when a web form was used and there is nothing coming in (e.g. nothing selected in a select form element), this leads to foreach being used on an empty string - which results in an error.

Revision e54f526d - 2010-08-30 15:32 - Karsten Dambekalns

[+BUGFIX] FLOW3 (Property): Fix mapping of empty traversables from request

When a property is a collection of objects map() tries to use foreach on the values. If the value is an empty string foreach causes an error. Avoid this by checking the type first.
