[FEATURE] Introduce AfterFileCommandProcessedEvent

A new PSR-14 based event "AfterFileCommandProcessedEvent" is introduced in favour of the existing `$GLOBALS['TYPO3_CONF_VARS']['SC_OPTIONS']['t3lib/class.t3lib_extfilefunc.php']['processData']` hook, which is now marked as deprecated, along with its interface "ExtendedFileUtilityProcessDataHookInterface".

The new event features the same data, however the way they can be accessed is improved.

The previous ``$action`` and ``$cmdArr`` arguments are now available within the ``getCommand()`` method, while the action is the array key and the command data (`$cmdArr`) is the value. This is more in line with the actual request.

The hooks ``$result`` argument always contained all results of previous operations, making it unnecessary complicated to find out the actual result for the current operation. This is now resolved. The new ``getResult()`` method only returns the result for the currently executed operation.

Finally the "getConflictMode()" method just returns the conflict mode, used for the current operation.

Resolves: #95089

Releases: master
