Description			
When browsing the TYPO3 v11 backend by List > Click on page icon of any page > More options .. > Export / Import / Create multiple pages / .. and reload the backend (Ctrl+R.): The page tree module does not load again but the module body takes the whole space.

we won't fix this in v11. at all. This is a conceptual issue that the module URL do not have a context (e.g. "page module, active page 15") in their URL, thus it cannot be used properly for link sharing or reloading.

Just my 2 cents: I'd love to have this fixed, but this would rather be a new feature then.
