

TYPO3.Flow - Feature #9547

Reactivate HMAC or implement substitute

2010-09-01 11:50 - Bastian Waidelich

Has patch:	
Description Currently Fluid Forms still create a hidden "__hmac" field, but apparently that is no longer validated on the server side. IMO we need this request hash validation to prevent CSRF (http://en.wikipedia.org/wiki/Cross-site_request_forgery) attacks. A possible alternative solution might be to store the form fields in a request stack (#3620)
