

## TYPO3.Flow - Bug #9557

### It's possible to persist multiple entities with the same identity properties

<b>Description</b> I annotated the "email" property of my test model with an @identity annotation. Now I would expect the persistence layer to prevent me from storing multiple instances with the same email in a repository. But that's not the case. Is that a (missing) feature or a bug?

I will drop this ticket in favor of [#29547](#) which is more concise in its title. The issue is the same.
