Description

Hi,

just wanted to give you guys feedback from my test running the DEV3 Plugin for Eclipse with Zend Studio 7.2.0 (based on Eclipse 3.5.1).

The plugin is installed and the .ts files show a correct association, but the editor can't be run (I suppose due to changes in Class-Structure from 3.3. to 3.5 etc.). Attached you find the error message I get.

I unfortunately dont have time and java skills to debug this thing seriously, just wanted to let you know of the issue. Hope to see an update for Eclipse 3.5/3.6 soon as I guess my issue isn't related to Zend Studio but to the Eclipse base....

Sry, wrong screenshot - seems to be a version number error - maybe just recompile necessary ?

#2 - 2011-05-13 09:44 - mathias petermann

I'm experiencing the same problem (Zend Studio 7.2 and Win 7)

I will try updating to Zend Studio 8 and to reproduce the problem there.
